Introducing.....

GPS Sub-Inch Implement Guidance

- Works with the Trimble® AgGPS® TrueTracker™ implement steering system
- Farmers' choice since 1987 for reliable and dependable 3-point implement guidance
- Easily converts to Cat 2, 3 or 3N; Cat 4 available
- The Sunco Stabilizer holds the implement in place to allow accurate steering

TRAK

3-Point Implement Guidance

WHY ACURA TRAK IMPLEMENT GUIDANCE?

**ELIMINATES
TAIL-OUT**

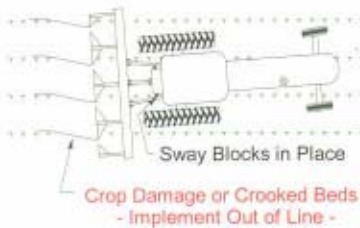

Acura Trak eliminates implement "Tail-Out" by lengthening and shortening the 3-point lift arms of the tractor. This is accomplished by movement of the Acura Trak crank arms as the tractor moves from the center of the row. Thus, the tool bar, when properly stabilized, is always 90 degrees to the row and the working tools are centered.

TRACTOR TURNING LEFT

**RISK TAIL-OUT
WITHOUT ACURA TRAK**

**ELIMINATE TAIL-OUT
WITH ACURA TRAK**

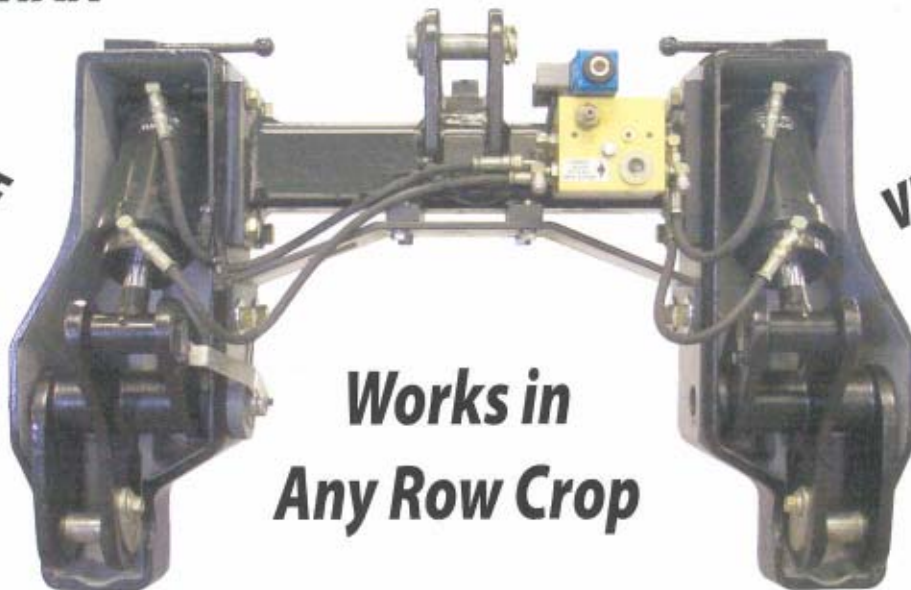

PROPER IMPLEMENT STABILIZATION IS A MUST - to achieve the desired guidance performance. The implement can not slide or move on it's own. If this occurs, stabilization will need to be added. The implement will then track properly, allowing the Acura Trak to steer it accurately using the GPS signal.

The Sunco Stabilizer is built strong and designed for versatile mounting on a wide variety of implements. The unique torsion spring provides positive stabilization in uneven ground and protection where rocky conditions exist. Easy height adjustment and a variety of brackets makes installation and use on most implements possible.
